

RELEASE NOTES

February 2015 Release Notes

February updates include:

- **Castlight Key**
- **Health account balance improvements**
- **Configurable visit type by employer**

Castlight Key

Castlight Key allows approved vendors to gain secure access to the Castlight platform on behalf of vendors in order to drive engagement with third parties, such as advocacy programs, on-site clinics, and second opinion services.

Vendors will empower Castlight users to make better healthcare decisions by directing them to low cost, high quality providers, while aiding in driving engagement.

Health account balance improvements

Castlight users with one or multiple types of health account balances will be able to see the details of their HSA, FSA, or HRA accounts through links on the Your Plan Page. Upon clicking the link, the user will be logged into the vendor's website through single-sign-on.

Castlight users will be able to see the balance details of each of their accounts through one click.

Configurable visit type by employer

Castlight now allows customers to set the default visit to either "first time" or "follow-up" for primary care and specialist visits.

Customers will be able to indicate their preferred default visit type to their account manager and have the default setting changed in the release following the employer's decision to alternate.
