

Castlight Release Notes

January 2016

- **Castlight Action**
- **Revised homepage**
- **January mobile update**
- **Castlight Key configurations**

Castlight Action

Last month we announced the release of Castlight Action. This month marks the launch of our two pilot customers.

Action is a predictive insight solution with the ability to transform engagement with our users, providing them with meaningful value. Going forward, Castlight will continue to augment Action with new and expanded opportunity sets, empowering employees and benefits leaders alike to get the most out of their medical benefits.

Revised homepage

As we continue to personalize our platform and ensure each user interaction is meaningful, we've made some changes to our homepage. Upon login, users will see cards containing information on their most recent claims. We've also shifted the Accumulator and Browse for Care widgets to the right, allowing users to immediately see more Action recommendations or Tips.

January mobile update

We've added a few new features to Castlight Mobile primarily in support of Castlight Action. We've also added recent claims cards to give users a quick look into their most recent care. In the event a user doesn't have recent claims to surface, Castlight Mobile will show them a "Tip," such as selecting a primary care physician and adding them to Care Team. These changes are indicative of our effort to offer users with a highly personalized experience whenever they log into our application.

Castlight Key configurations

Castlight is now able to turn off provider pricing for third-party vendors logging in via Castlight Key. This will be enabled in both Plan and Personal key and apply to Castlight Essentials, Dental, Pharmacy, and Elevate. Castlight decided to enable this feature to avoid launch delays of Key stemming from data rights issues.
