

# Castlight Release Notes

October 2015

---

- **Treatment facility search radius expansion**

## **Treatment facility search radius expansion**

By launching Castlight Elevate, Castlight began its offering of services related to behavioral health conditions. Among these are substance abuse and addiction. Users now have the ability to search for treatment facilities within the Castlight application, just as they would a hospital or dentist office. Because such facilities typically aren't as common as hospitals, those in need of treatment may opt to travel greater distances. The search radius expansion allows users to find facilities up to 500 miles away in order to find the treatment they require.

### **Key enhancements**

- Search for treatment facilities can return results up to 500 miles away if there aren't enough results within user's proximity
