Medication Search Enhancement

To support members' understanding of their pharmacy coverage, our enhancement provides new visual drug alert indicators that display coverage requirements such as prior authorization or specialty drug coverage alerts. These alerts are prominently displayed on the landing page of medication search results. Additionally, any medications that are obsolete or discontinued will not be offered as therapeutic alternatives. This enhancement is applicable to all customers who have Find Care Rx Search enabled.

Pioglitazone is a diabetes drug (thiazolidinedione-type, also called "glitazones") used along with a proper diet and exercise program to control high blood sugar in patients with type 2 diabetes. [Learn about this medicine](#)

Empowering members with control of their data through in-app delete account request process

Members can now navigate to their account settings to initiate a request to delete their account. This enhancement allows members to better manage their own data and information. The new Delete Account page contains details and options to contact Support for account deletion. The message support option will only be shown to members who have Chat enabled. This enhancement is applicable to all customers.
